LPX Platform
Ultrasonic Welding Systems for Low Power Applications
Application Flexibility with Maximum Process Control

Available in Three Frequencies with Multiple Weld Modes

The LPX platform of low power ultrasonic systems is Branson’s latest offering for applications with power requirements of 550 Watts or less. The LPX utilizes Branson’s patented circuitry with closed-loop control to provide maximum process control.

The LPX units can be used with their appropriate hand-held welder or can be connected directly to a converter/booster/horn stack. The LPX provides the user multiple weld modes: continuous, time, and energy. The LPX is also available with an optional factory-installed ground detect.

Three frequencies are available:
- 20 kHz at 150 and 550 Watts
- 30 kHz at 550 Watts
- 40 kHz at 550 Watts

The LPX includes:
- Custom Icon-Driven User Interface
- Ten Presets
- System Protection Monitor with Autotune
- Line/Load Regulation
- Multiple Welding Modes with Ground Detect Available
- Hand-Held Systems
- NRTL Certified
Hand-Held Welders with Pistol or Barrel Grip

The LPX series hand-held ultrasonic welders are compact, lightweight tools used to spot weld or stake large, complex parts and those with hard-to-reach joint areas. Two types of hand-held welders are available, pistol grip (PT) and barrel grip (HT).

With pistol grip (PT) models, the trigger switch is located on the grip; barrel grip (HT) models have the trigger switch located on the side of the barrel. All units may be operated utilizing a remote trigger, a start signal, or by the start/stop switch located on the front panel.

With the HT-215 model, a spring-loaded sleeve automatically triggers the ultrasonic welding cycle when the operator applies pressure against the part. An adjustment screw is used to vary the force required before ultrasonic triggering occurs.

Advanced-Performance Features for Process Control and Reliable Power

User Interface/Process Controls

- **Digital parameter entry** for precise, easy setup.
- **1 ms sampling rate** of all data provides superior performance.
- **Digital amplitude control** allows fine-tuning for critical applications (ranges from 10% to 100% in 1% increments).
- **LCD interface** with straightforward icons provides improved navigation, easier configuration, and shorter setup time.
- **Self-diagnostics and monitoring** provide visual, audible, and logic output alarms.
- **Selectable auto reset conditions available for all alarms.**
- **Save and recall presets** provide up to ten presets for aid in setup.
- **Optional ground detect** can be used to detect horn-to-anvil contact or can be utilized as an “ultrasonic cut-off” signal/safety override in all available welding modes. (This is optional and must be factory installed).

Power Supply Key Features

- **Line/load regulation** – Branson’s patented closed-loop amplitude control corrects for variations due to power line fluctuations (±10%) and varying load conditions.
- **LCD interface** displays weld mode and weld parameter settings with straightforward icons to ease configuration and shorten setup time.
- **Visual and audible alarms and external outputs** identify overload, machine faults, and setup errors.
- **Last weld results** including peak power, time, energy, and amplitude are available for viewing on the LCD interface.
- **System Protection Monitor (SPM)** – Five levels of power supply protection are provided to reduce equipment failures and improve weld accuracy and repeatability.
- **Autotune Plus Memory (AT/M)** – Provides fully-automatic horn frequency tuning by storing the horn frequency at the end of each weld for consistent and reliable horn starting.
- **Timed seek** tracks the operating frequency of the stack when the system is idle.
- **Sequence of operation** is viewable through the LCD interface during the welding cycle.
- **Non-volatile storage of setup parameters** provides storage of setup parameters if system is shut off or a power loss occurs.
- **User I/O interface** provided for direct hookup with +24V DC programmable controllers.
- **Preset weld setup** – The power supply can save and recall up to ten preset configurations, allowing consistent and repeatable setup.
Mechanical Specifications
Height: 242.3 mm
Width: 203.2 mm
Depth: 348.2 mm
(Add 76.2 mm for cable clearance)
Depth Including Handle: 389.2 mm
Weight: 14.5 lbs (6.5 kg)
